1. Code Pattern

- The code is written in java.
- 3 Package is created .
 1. hooks
 - Here chrome driver launches, quit after every test case and taking screen shots here.
 2. Steps
 - In this package you will find actual java code.2 classes is created for testing 2 feature files test cases.
 3. TestRunner
 - From here you can actual run all the test cases.For testing just specific feature file just give name after “features/” like “features ={"src/test/java/features/Login.feature"}”

2. Feature File

Used 2 Feature file for 2 test cases

1. Login.feature
 - This File contains 2 scenario 1 is for positive user will login and 2nd is if user with wrong password and user name
2. Addtocart.feature
 - This contains 1 scenario with all types of sorting (hig to low price , low to high price , A to Z sorting , Z to A sorting).
 - Add product to cart then check shopping cart status update to 3.
 - Remove 1 product and then again will check shopping cart status update to 2 or not.

3. Report Used

- I used default Cucumber report which will shows all test cases that will run with screen shots.
- Path of report “target/CucumberReports.html” and format of report is .html.
